

Simple Profit Analysis Report

Data Analytics Track | Task 16 | Veda Technology Internship

Prepared by:	Akshat Srivastava
Track:	Data Analytics
Task:	Task 16 - Simple Profit Analysis
Tool used:	Microsoft Excel (PivotTable & PivotChart)

Objective

To compare total profit across product categories (Furniture, Office Supplies, and Technology) in order to understand basic profitability, using a Superstore-style sales dataset.

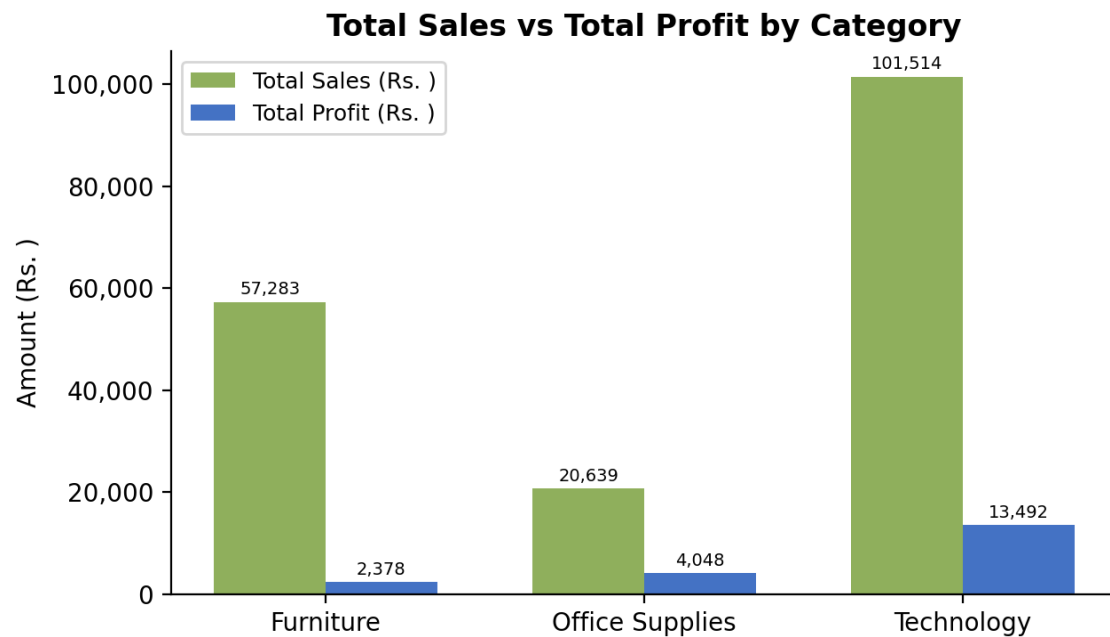

Methodology

The dataset was organized into an Excel Table and analyzed using a PivotTable, grouping all orders by Category. For each category, the Total Sales, Total Profit, and Average Profit per order were calculated, and Profit Margin was derived as Total Profit divided by Total Sales. A PivotChart was created to visually compare Sales and Profit across categories.

Profit Summary Table

Category	Total Sales (Rs.)	Total Profit (Rs.)	Avg. Profit/Order (Rs.)	Profit Margin
Furniture	57,282.80	2,377.90	26.72	4.2%
Office Supplies	20,639.32	4,047.76	40.48	19.6%
Technology	1,01,513.90	13,492.42	121.55	13.3%
Grand Total	1,79,436.02	19,918.08	66.39	11.1%

Chart: Sales vs Profit by Category

Key Insights

- Technology is the most profitable category, generating Rs. 13,492 in total profit and the highest average profit per order (Rs. 121.55), despite also having the highest sales (Rs. 1,01,514).
- Office Supplies delivers the best profit margin (19.6%) relative to its sales — it earns Rs. 4,048 in profit from just Rs. 20,639 in sales, making it the most efficient category.
- Furniture is the weakest performer: despite decent sales of Rs. 57,283, it generates only Rs. 2,378 in profit, with the lowest average profit per order (Rs. 26.72) among all categories.
- Overall, the store generated a total profit of Rs. 19,918 across Rs. 1,79,436 in sales, an overall profit margin of 11.1%.

Conclusion

Technology drives the highest profit and profit-per-order, Office Supplies offers the best margin efficiency, while Furniture underperforms despite strong sales. Focusing on improving Furniture's pricing or discount strategy could help raise its profitability.
